

Assignment:

Make 3 page simple HTML website

1st page name should be index.html or home.html

2nd page name should be contact.html

3rd page name should be about.html

All these pages should be connected to each other with anchor tag like we can navigate from one page to another like we have done in 1st class

Contact page:

This page should consist of form. Input types can be name, email and message.

Bonus:

You can use `<input type="text">` for message but there is another tag called **textarea** you can do some research on it to use it instead of input type text

About page:

This page should just consist of simple paragraph text you can use any dummy text you want

Home page:

This should also be a simple html page you can add any image on this page

Make sure all these pages consists of anchor tags on top so that we can make sure we can navigate from one page to another.
